The diagram illustrates a 3D structure composed of black rectangular blocks. It features several horizontal layers. The top layer consists of a long horizontal strip of small rectangles, with a cluster of larger rectangles extending downwards from its right side. Below this, there are two more horizontal rows of rectangles. The middle row contains a single column of four small rectangles on the far left, followed by a group of five larger rectangles, then another group of four small rectangles, and finally a long horizontal strip of small rectangles on the far right. The bottom row has a single column of four small rectangles on the far left, followed by a group of five larger rectangles, then another group of four small rectangles, and finally a long horizontal strip of small rectangles on the far right. A thick black bar runs horizontally across the middle of the structure, partially obscuring the middle row's rectangles.

The image shows a sequence of black squares arranged horizontally. From left to right, there is a pair of squares, a triplets of squares, a doublet of squares, a triplets of squares, a quartet of squares, a single square enclosed in parentheses, and a final sextet of squares.
